08/2014 - 06/2018

Experience

Larsen & Toubro Infotech

Pune

Software Engineer

08/2018 - 12/2021

- **Retail International Banking project** : Implemented majorly backend software development and enhancements using core Java, JavaScript, Spring, HTML, and XML to meet requirements and align with strategic solutions as a product engineer for a South African bank as a client, employing agile methodologies and collaboration tools like Jira and ServiceNow ; orchestrated project scope definition, system requirement formalization, and stakeholder coordination, showcasing adeptness in business analysis techniques, problem solving and stakeholder management.
- **Online Sales Fulfilment project**: Directed software testing efforts, implementing Selenium automation testing and reducing testing time by 35%; collaborated with onshore teams for comprehensive functional testing and UAT testing offshore , employed Agile processes to adapt to change and improvement requirements, prioritizing tasks effectively, and ensuring project change delivery and deployments within timelines.
- **Rest Of Africa (Channels) project**: Empowered distributed banking system applications management as a product support analyst, leveraging expertise in Unix/Windows Operating Systems and SQL Server, Oracle DB, and DB2 database management systems; experienced in debugging, decision-making ,incident management and change management.
- Led my team during deployments whenever given an opportunity and coordinated with stakeholders and managed a critical data migration and took charge of night shifts, handling production-level data and resolving major post production issues across the projects I was involved in while partnering with cross-functional teams.

Personal Projects

Mutual Fund India analysis (Data Analytics)

- Handled Mutual Funds India data for visual representation and data insights. Attempted to suggest the best Mutual Funds based on equity, hybrid, and debt ; Created an interactive Power BI dashboard for better understanding of interest rate growth and peer comparison.

OTT data analysis (Data Analytics)

- Supervised OTT data, utilizing Python and libraries such as Pandas, Numpy, Seaborn, and Dash to provide data insights and visually recommend top shows, my work involved considering various factors like director, genre, duration, OTT platform, and certification for the suggestions ; Worked on an interactive Power BI dashboard to better understand interest rate increases and peer comparisons.
