PROJECTS

Multi-threaded Client and Single-threaded Server || Oct 2020

- The client validates the correct IP address and port to connect
- The client also asks for the type of Linux command for the server to run
- the server takes the request and runs each command one by one and sends the output
- The client then prints out the output from the server, the average time for each client request, and the total time for all the requests to go through

Auto Parts Inventory System || Mar 2020

- Web app that simulates an inventory system for an auto parts store
- Uses Flask and SQLite to store data about each part
- Ability to create, delete, and edit information through a simple interface
- User can also get how many items and how much total inventory is currently stored

CORE STRENGTH

- Excellent communication skills both verbally and written, able to express ideas clearly and confidently
- Skilled at learning new concepts quickly and working well under pressure
- Full of energy and a desire to get things done quickly and effectively
- Meticulously organized, detail-oriented, and extremely efficient

WORK EXPERIENCE

SOFTWARE SYSTEMS ENGINEER || KNAPP inc. || Kennesaw, GA || March 2021 - Present

- Installation and setup of logistics software at Customer Sites
- Programming software customizations and adapting configurations
- Developed queries and reports by accessing the software's database (SQL)
- Provided training and support of customers on issues related to our software and logistics
- Documentation and finalization of projects for handover to the customer service department
