As a software engineer with 5 years of experience, I have participated in the development of several successful applications. I am skilled in all stages of the development process, and am committed to delivering high-quality work. I am experienced in working as part of a team, and have a proven track record of meeting deadlines and achieving targets. I am confident in my ability to contribute to the success of any project I am involved in.

EXPERIENCE

MAY 2018 – DEC 2022

SOFTWARE DEVELOPER, TRAIL ANALYTICS

As a developer, I played a key role in enhancing and adding new features to the widely-used reporting tool called 'Credit Analyst,' utilized by numerous banks in Uganda. This tool is crucial for reporting credit information to credit reporting bureaus like Experian and Compuscan, enabling them to generate credit reports for lenders and organizations to assess the creditworthiness of individuals and businesses.

I also developed and managed a bulk SMS platform, facilitating the delivery of agronomic tips to farmers in Uganda. This platform was integrated with third-party APIs (ONA, AWhere) to provide real-time weather data.

In addition, I contributed to the creation of a public dashboard, offering insights into various initiatives supporting Ugandan youth in agriculture.

My experience includes reading and comprehending code, as well as maintaining and updating existing systems.

JUNE 2022 – PRESENT (PART TIME)

FULL STACK DEVELOPER, NTUMA PAYMENTS SOLUTION

As one of the founding engineers at Ntuma Payment Solutions, I played a leading role in creating a groundbreaking payment processing system. I worked on both the technical backend and the user-friendly frontend, using my deep understanding of technologies like Node.js, React, Typescript, and Tailwind, among others. This fintech startup has now launched, and several small and medium-sized businesses are using it to accept payments from their customers.
