

Mitesh P.

Sr. PHP/Laravel Specialist

Summary

As a PHP/Laravel developer with over 6 years of experience, I am highly skilled in both PHP programming and the Laravel framework. I have a deep understanding of web development principles and have successfully built secure and scalable applications. My expertise in Laravel includes working with MVC architecture, utilizing Eloquent ORM, implementing authentication systems, and leveraging Laravel's extensive library of components. With a strong knowledge of industry best practices and coding standards, I ensure the delivery of high-quality code and effective collaboration within development teams.

- PHPUnit (feature unit tests)
- YAML, CI/CD-pipelines
- Redis

Dev Ops

- Linux experience
- CI/CD Pipelines
- Docker/Kubernetes
- Nginx/Apache
- AWS, Azure, GCS
- Performance
- HTTP/S

Projects

Now Auctions (<https://nowauctions.net/>)

- **Functionality:** Front Website, Admin Panel, Vendor Panel, Payment Gateway (Recurring and split payment with vendor commission), Cron Job, Web Socket Implementation
- **Description:** This is an Auction website. The vendor can create the auction and its start date. Customer can bid on this specific auction once the auction start. There is available the Reserve price (E.G. 500), So customers can not bid less than 500. The counter has been started after the auction started and this counter is decreased every second. The auction will end when the reserver price and counter will be the same. The highest bidder will be the auction winner. Bidder save is credit card details at the time of inserting the bid. The cron job will be executed and deduct the money directly from the auction winner's account. Place the order and send the order detail mail to auction winner and admin both.

CycleHouse (<https://www.cyclehouseinternational.com/>)

- **Functionality:** Food & Rider App, Admin panel, Food Merchant panel, Rest API
- **Food delivery app.** Facility to search all Resturant and food by using this app. Customer can order by now for today's food item and customer can also order for future food items by using pre order facility. Available the discount coupon of Merchant and admin both. Food merchant can assign the rider and rider can deliver this order by motor bike OR cycle based on location distance. Parcel service also included into user food app. Push notification, chat feature, SMS otp, mail alert's features are present in app. Food merchant can add banner for advertisements and also add product and related attribute like size.

Car Rental (<https://www.carrental-mauritius.com/>)

- **Car rental** is developed for the agency of car rental in Mauritius. Users can login and find the rides for the location and dates. Book a car for rent, With different car types like SUV, Economy, Luxury SUV etc. Users can book additional options like driver, mobile GPS, Baby seat etc. Users can view and manage their bookings and print invoices. Portal has developed for staff and tour operators also. Agency has many offices in Mauritius. Users can book their ride from the office also.
- Feel free to ping me for more portfolio projects.
