London

As a HCI masters student and computer science graduate, I am skilled in developing efficient and accessible software frameworks for diverse audiences. With experience in multiple programming languages and UX design, I am a versatile and self-motivated programmer. I thrive in collaborative team environments and am eager to contribute my talents to a dynamic sector.

2014 - 2016

CONTRACTED PRODUCT DESIGNER

As a contracted UX product designer at Recruitable.asia, my primary responsibility was to design and improve the user experience of the company's digital products and services. I worked closely with product managers, engineers, and stakeholders to gather requirements, create wireframes, prototypes, and design mockups, and conduct user testing to ensure that the final product met the needs of the target audience. In addition, I communicated with clients or external stakeholders to ensure alignment with their goals and objectives, and completed projects efficiently and within deadlines while maintaining a high level of quality. I possess strong communication, collaboration, and time management skills, as well as a solid understanding of user-centered design principles and the latest trends and technologies in UX design.

UX DESIGN INTERN

As a UX design intern, I presented my UX designs and solutions to senior staff, advocating for user-centric design decisions. I analysed user feedback to shape future UX updates, improving user concerns and pain points during subsequent patch cycles. I utilised both qualitative and quantitative analysis techniques to continually enhance end-user experiences. Through iterative back-end development updates, I maximised system performance and improved end-user experience.

EDUCATION

MASTER OF SCIENCE

Human Computer Interaction

University College London
(UCL)

2022 -Present

BACHELOR OF SCIENCE

Computer Science

City, University of London

2017 - 2020

EXPERTISE

- Web Design
- Design Thinking
- Wireframe Creation
- Adobe
- Front End Coding
- Problem-Solving
- Computer Literacy
- Java
- UX/UI
- C++
- Script
- HTML
