## PROJECTS

- **Project Progress Record System**

The system is basically for removing the written work of teacher's and student's in colleges the project given to the student and assign the guide by manually and all work done on project will written in some paper to remember the work progress with the help of this system we will make the software to feed the data on system that will helpful to student as well as teachers.

- **Phd Tracking System**

In the system is created for the outer student who will come in our University for Phd so, they have knowledge of their guides and presentation dates and any other circular activities related to their studies.

- **Repairing Service Management**

This system is like to add outlets of repairing around our area for providing better services to the customer. They should find store according to their services on best price. On selecting the outlets then they should assign their boy to check the machine and if it will repair on time they should repaired otherwise. The boy should take that machine to the service centre and make that machine in working condition.

- **Analysis Data Set Of Employee**

This system is basically for HR of the company to predicte the data that why employee leave job, what facility not given to them and understand their problem and work on it. Employee data should already present in company of HR they should predict the data of particular employee and start deployment.
