- Flutter
- Native iOS
- Native Android
- Swift, Kotlin, Dart
- Git, CI/CD, Firebase

EDUCATION

Bachelor of Software Engineering

Wolkite Univeresity

2016-2021

LANGUAGES

- English 
- Amharic 

PROFILE

I am a results-driven Mobile Application Developer with a strong background in software engineering, specializing in the development of innovative and user-centric mobile applications. I am recognized for exceptional programming skills and a passion for creating impactful solutions. My achievements include commendable results in an international programming contest between universities. I am proficient in native Android development with Kotlin, iOS development with Swift, and cross-platform app development with Flutter.

WORK EXPERIENCE

Mobile Application Developer

Two F Capital 2019 - Present

- Starting from my internship, I started my journey at 2F Capital and have since made significant contributions to various mobile application projects.
- Developed Automatrix, a car inspection app built in Flutter. This app enables garages to efficiently inspect cars for a prominent ride-hailing company, ensuring a seamless experience for both drivers and passengers.
- Created CNCM, an innovative app for Ethiopian art creators. Built with Flutter, this platform allows artists to register, authenticate their creative work, and effectively manage the monetization of their content.
- Developed Ride Plus, a native iOS and Android app with a comprehensive taxi-hailing and payment feature. The success of this app is evident through our remarkable achievement of over 50,000 customers and an impressive daily average of 15,000 completed trips, solely operating in Addis Ababa.
 - Collaborated with a team of two developers to build the Android app using the new Kotlin Jetpack Compose framework, ensuring high-quality code and seamless user experience.
 - Solely developed the iOS app, utilizing the new SwiftUI framework. By leveraging the latest technologies, we delivered an intuitive and visually appealing app to iOS users.
 - Actively engaged in ongoing app maintenance, adding new features, and utilizing Firebase Crashlytics to track and resolve any issues. Continuously striving to optimize performance and enhance user satisfaction.
- I am also responsible for overseeing and managing a team of mobile application developers within my company. This role involves providing guidance, mentorship, and technical leadership to the team, ensuring efficient project execution, fostering a collaborative work environment, and driving the successful delivery of high-quality mobile applications.
