## **Profile**

A highly analytical and result oriented professional with years of experience in computer programming, I.T support and secretarial services.

Good team player with excellent communications and interpersonal skill at all levels. Quick learner and easily switch to new platforms when needed.

## **Experience**

### **Senior Software Engineer – Kuulchat Media, Ghana – 2015 – Till Date**

Projects worked include:

#### ***Kuulchat Educational Social Network (kuulchat.com)***

*The number 1 educational social network in Ghana*

The project has a website (kuulchat.com) written in php, jquery, css, javascript and a mysql database server. The website is accessed by students from the Junior High School to the tertiary to learn and socialize.

A management system is also built also written in php, jquery, css, javascript and a mysql database server which is used by the instructors to upload past questions and teaching resources for the students to access on the website.

A mobile application is also developed with flutter which is available on both app store and playstore for the students to download on their phone to use the services.

#### ***Tickets House Limited Flight Booking Site (tickets-house.co.uk)***

A website for booking flight on the company's website tickets-house.co.uk. I used an API from a partner company for searching for the flight and displaying the results. The customer can enter his/her details and book for a flight.

This was written in php, jquery, css, javascript and a mysql database server to save booked information.

#### ***Mainoksia (mainoksia.com)***

This is a website built for companies to post discounts and for visitors to browse through and when interested, visit the shop/office premise to purchase/patronize services.

A mobile application is also developed with flutter which is available on both app store and playstore.

#### ***BankSoft***

A banking application developed in PHP which is used by some banks and microfinances in Ghana. The online version for subscription is available on finwaver.com.

A mobile application is also developed with flutter which is used by customers to access their accounts and field workers to use to record customer's transactions.

### ***ClockIn***

This is a mobile application developed with flutter which is used by staff to clock in and out at the company's premises. The application uses GPS to check if the staff is at a given radius of the company to determine whether the staff is at work or not.

### ***CloseApp and CloseApp Business***

These are a mobile apps developed with flutter for users to search for services nearby. The business version of the app is the *CloseApp Business*. The app gets the user's latitude and longitude via the GPS and fetch from the system which businesses are nearby rendering the requested service.

### ***ZackPharma***

This is a mobile application developed with flutter available on both app store and playstore developed for ZackPharma Limited to sell drugs to their customers.

### ***HM Shuttle***

Mobile application developed with flutter which is used by students of University of Ghana to board HM Shuttle buses.
