

Greetings,

I'm Mohammed Shadid, a Front-End and Full-Stack developer interested in joining your team and projects.

I began my academic journey at Arab American University (AAUP), and then I recently completed a Full Stack Developer bootcamp with AXSOS Academy and learning material by Coding Dojo. The bootcamp equipped me with 1200 hours of coding practice, 100 hours of algorithms and data structures training, and hands-on experience in completing three full projects.

After learning Full Stack, and mastering the different arts of development, I felt more interested in Front End Projects and more involved in them, especially since I am a detail-oriented developer, who is a junior developer and interested in learning and developing my skills to present the best user experience and user interface, and widen my knowledge in all possible manners.

As a self-sufficient developer, I went through the immersive bootcamp and developed the skill of "learning how to learn", where we learned the Python, Java, and MERN stack and learned how to master new technologies in 3-4 weeks. This program and the life-changing journey came after studying accounting and working in related fields for 3 years, which added to my soft, professional, teamwork, and managerial skills as well, to have me prepared for the market immediately.

As a Front-End Developer, I'm excited to delve into the high-tech industry and develop cutting-edge solutions that promote positive growth and change in both the virtual and physical worlds.

Feel free to take a look at [my CV](#) and portfolio (<https://mohammedshadid.site/>) for more information.

Looking forward to hearing from you soon,

Best Regards,

Mohammed
